Train your brain to increase mental productivity, cognitive efficiency, and overall brain health.

The brain is the most vital organ to everyday-life functioning. It is just as essential to measure and monitor brain fitness as it is to measure and monitor physical fitness. The high performance brain training program, Strategic Memory Advanced Reasoning Training (SMART), was developed by Center for BrainHealth researchers and is based on more than 25 years of cognitive neuroscience research.

Adoption of the program has been scientifically proven to:
Increase productivity
Increase flexibility in thinking
Achieve higher levels of work efficiency
Enhance decision-making
Elevate levels of brain efficiency
Build resilience in brain function

The program includes:
• A confidential and informative brain performance assessment that measures strategic attention, integrated reasoning, and innovation, key areas critical to maximum brain performance
• A post-performance consultation approximately one month after program completion to include an individualized brain action plan
• Ongoing monitoring and touch points with participants to ensure adoption of SMART strategies

Excellence at No Cost
Through scholarships provided by private philanthropy, this top-tier training is available at no cost to active duty military and veterans. The high performance brain training is currently offered to the public at $5,200.
